

Design Notes

Using a similar layout to version 5, (“control strip” metaphor) but with the controls placed around the outside edges of the “content” zone. The background shape and fill-pattern, (“skin”) could be different for each location, (see the rough/mock-up examples to illustrate this).

Note: This layout doesn’t require any transparency, (a Flash constraint).

“Background”

We could still have “theme” backgrounds, e.g. aquarium, safari, town-plan, etc., to match the location of the kiosk.

See examples...

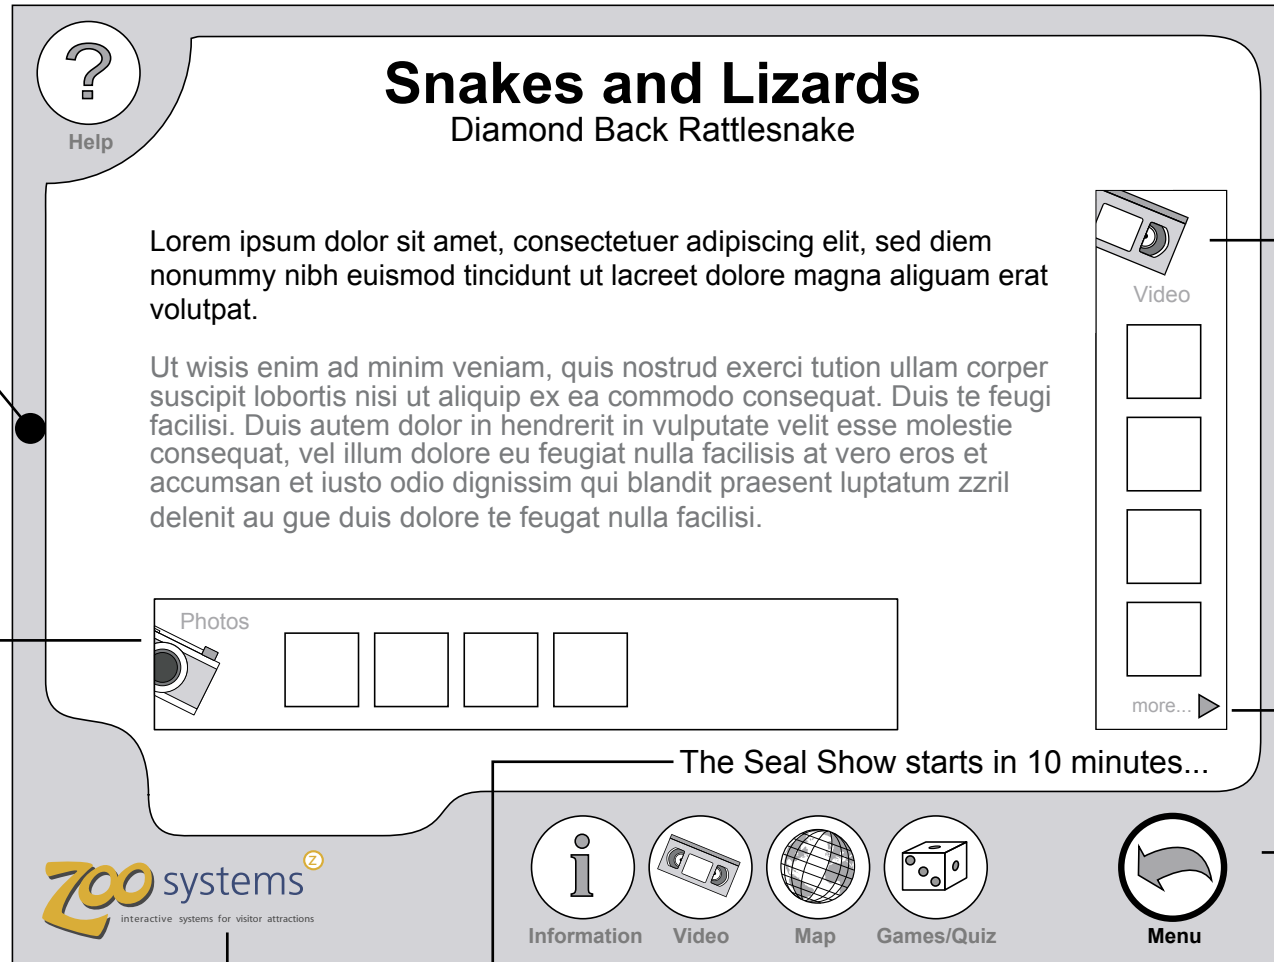

Notice I removed the heading: “Species Information”

“Media Zone”

In this example Photos are displayed but this zone could contain any media.

Maybe the videos and photos could appear in the same zone?

These zones could be displayed without the frame & icon.

“Media Zone”

In this example Videos are displayed but this zone could contain any media.

“View More”

Clicking the triangle could display more video clips. If we do this we will need a “Previous” triangle to get back etc.

“Brand”

Consistent presentation of the Zoo-Systems brand.

“Reminders/Alerts”

These could slide onto the screen from right to left.

“Menu”

Different treatment so it stands out better and so easier to find to navigate back to the start.
